

DID YOU KNOW ?

The most common types of viral hepatitis are hepatitis A, B, and C. According to the CDC, about 66% of people with hepatitis B are unaware that they are infected and about 40% of people with hepatitis C are unknowingly living with the infection. The only way to determine if the infection of hepatitis A, B, and C is present is by testing.

HEPATITIS A

- Contagious liver infection
- *Symptoms:* Nausea, vomiting
